

Create Space Art
HERE

LEVEL 0 SPACE ART

Create your own
BMO - Message from Space

Iron Filings Art
FerroFluid Art

All grade levels - 4th grade
and lower with a mentor

Block Coding

Creative fun ways to expand your imagination regardless of age.

Create and record custom messages
from BMO on the ISS

Level 0 Space Art Microgravity is more than serious science, it is fun. Engage your student's creative juices at any age, using block coding and their imaginations to create:

 Video messages from the ISS. Program BMO from Cartoon Network to move its arms and knock space bits around while saying or displaying different messages. It's all captured on video so your students can post it to their friends!

 Mesmerizing Space Art. Programmatically controlling magnets to manipulate iron filings or ferrofluids in microgravity creates today's version of the "Lava Lamp".

Design dynamic art by programming magnets to control Iron Filings or FerroFluids in Microgravity
